infection (incidence) rate - the cumulative number of confirmed cases of COVID-19 for the 7-day period divided by the total population of each area multiplied by 100,000

<sup>&</sup>lt;sup>2</sup>A rank of the rate of COVID-19 per 100,000 by local authority. There are 343 local authorities in England. A decrease in rank does not necessarily mean our rate is decreasing, rather, other areas rates are increasing at a greater speed.

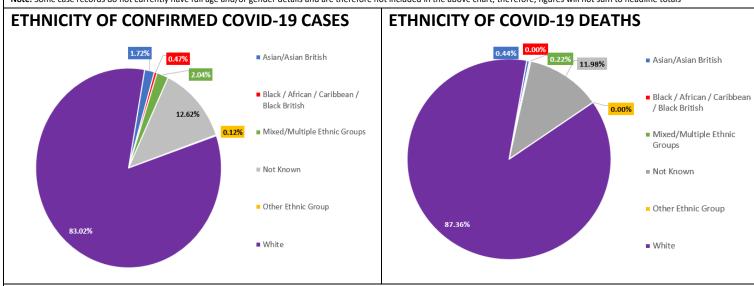

## The weekly Coronavirus (COVID-19) surveillance report for Wirral

### Week ending: Friday 25th December 2020

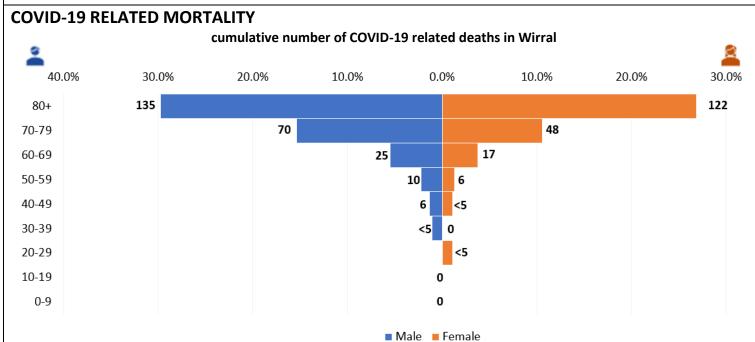

<sup>3</sup>median age is the middle value in a range - half of the cases are younger than this age and half are older (all persons)

Note: Some case records do not currently have full age and/or gender details and are therefore not included in the above chart; therefore, figures will not sum to headline totals

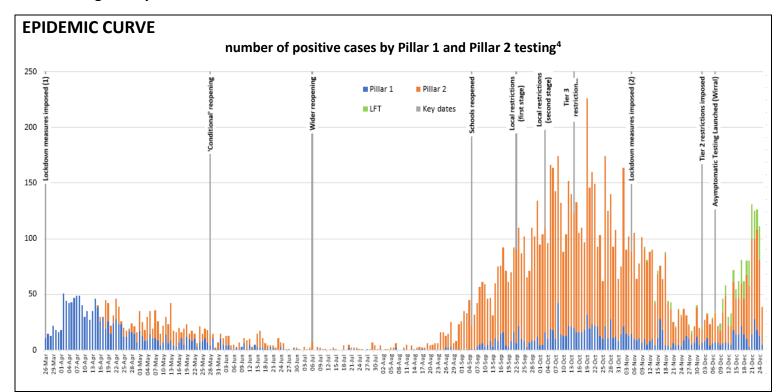

Note: These data are analysed using the cumulative confirmed cases and COVID-19 related deaths in Wirral

Note: The above data has followed the methodology of the PHE indicator for 'Deaths within 28 days of a positive COVID-19 test' since reporting for week ending 30<sup>th</sup> October and is therefore not comparable to reports prior to that week. The figures are still derived using a local live data source and so will therefore not exactly match the number of deaths officially reported by the Office for National Statistics or the PHE Coronavirus Tracker. Further validation of the external data sources with fully coded dates has now led to changes in the numbers reported.

## The weekly Coronavirus (COVID-19) surveillance report for Wirral

#### Week ending: Friday 25th December 2020

<sup>4</sup>The most recent week is a partial week and only data from more than five days ago can be considered complete

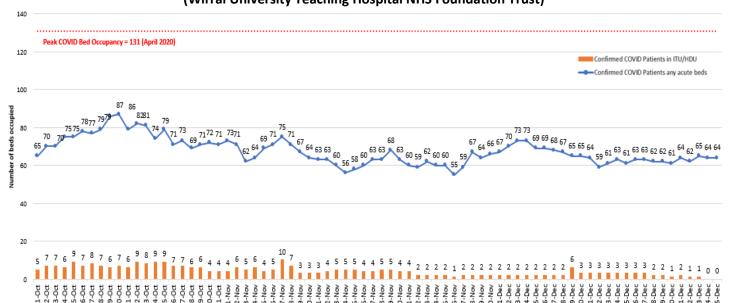

The data are shown by the date the specimen was taken

To allow data to be seen accurately, the chart only shows data from the date lock down measures were imposed (23 March 2020); this includes the peak of the first wave (April 2020) Pillar 1 data is for swab testing in PHE labs and NHS hospitals for those with a clinical need as well as staff

Pillar 2 data is for swab testing for the wider population, as set out in government guidance

#### **HOSPITALISED COVID-19 CASES**

Note: The peak date for hospital occupancy was in April 2020 with 131 confirmed COVID-19 patients in beds (peak number of ICU beds occupied by COVID-19 patients was 9 in the 'first wave', which was surpassed on 7<sup>th</sup> November (n=10)). It should also be noted that the ITU/HDU beds (orange) are a subset of 'any acute beds' (blue), e.g., on 9<sup>th</sup> October there 64 beds occupied by COVID-19 confirmed patients, 3 of these were in ITU/HDU beds.
