## SMOKING PREVALENCE REPORT DECEMBER 2012.

Wirral NHS Smoking Prevalence Survey September/October 2012.

The Directors of Public Health in NHS Wirral have identified tackling the harm caused from smoking as one of the priority areas for action. NHS Wirral currently has a well established and successful stop smoking service; however, in some areas of Wirral, prevalence is significantly higher than the national average.

In parts of Wirral, particularly within the Seacombe, Birkenhead, Bidston and Tranmere areas, considerably more people are likely to smoke. It has been estimated that in these most deprived neighbourhoods in Wirral, smoking prevalence is significantly higher when compared to an average of $27 \%$ across the whole of Wirral.

To establish the actual levels of smoking in the most deprived areas of Wirral, a smoking prevalence survey has been undertaken to inform NHS Wirral's smoking cessation strategy. The survey has targeted selected areas of Wirral which will provide a proxy indicator of the smoking prevalence amongst adult residents within the lowest national quintile (i.e. lowest $20 \%$ ) of lower super output areas by index of multiple deprivation in Wirral on an annual basis. The survey has now been undertaken for four years $2009-2012$.

As well as providing information on the levels of current smoking the survey also aimed to provide data on a number of aspects of smoking behaviour and lifetime smoking habits of the residents. Specifically, data was collected on:

- Smoking prevalence amongst respondents
- Current rates of daily, occasional and abstinence from smoking
- How long respondents had smoked
- Type and number of tobacco products used
- Time since respondents had last smoked daily
- Number of times respondents had attempted to quit in their lifetime
- Number of quit attempts lasting longer than four weeks in the last six months
- Intention to quit smoking
- Smoking in the car and in the home
- Been offered counterfeit, fake or duty free cigarettes
- Cannabis usage.

### 1.2 Baseline Survey

NHS Wirral provided a geographical sampling frame for the sample selection process based on specific post code areas. Sample size within these post codes areas was based on the principle of 'sampling with probabilities proportionate to size' methodology. To provide data of high statistical reliability in respect of smoking prevalence we identified a total sampling frame of 5,000 names and addresses. Within each of the sub-areas, the households to be surveyed were randomly selected from a post office address file.

In most cases, interviewers called at selected households to conduct a face-to-face interview. This schedule was a series of closed questions designed to meet the survey objectives and gather data as detailed above and also information about the respondents' characteristics in terms of gender, age, ethnicity, occupation and home locality.

Where a telephone number was obtained (from the BT database) and because response rates were not prejudiced, a series of attempts were also made to complete interviews by telephone. Some households were targeted through both approaches to maximise the response rate. The interviews were carried out during the day, in the early evening and at weekends. Adults aged 16 or over and resident in Wirral area were eligible to be interviewed. A team of trained and experienced interviewers carried out the interviews; the fieldwork commenced September 2012 and was completed by the middle of October 2012. A total of 3,435 interviews were satisfactorily completed out of a total of approximately 4,826 addresses representing a $71.2 \%$ success rate. A number of household addresses were eliminated because they could not be found, could not be accessed, were 'void' or were considered unsafe. A verification procedure was implemented which was based on a random selection of $5 \%$ of respondents to confirm the interview took place.

Table 1.1 Number of interviews completed within each of the specified areas

| Postcode | Areas | No. of interviews |
| :--- | :--- | :---: |
|  |  |  |
| CH42 | Birkenhead \& Tranmere | 662 |
| CH43 | Bidston, Claughton, Manor Green \& Prenton | 1212 |
| CH44 | Seacombe | 369 |
| CH45 | Liscard | 334 |
| CH46 | Moreton \& Leasowe | 136 |
| CH48 | Grange | 95 |
| CH49 | Woodchurch \& Upton | 201 |
| CH62 | Bromborough \& Eastham | 412 |
|  | TOTAL | 3421 |

N.B. The total number of interviews completed was 3435. 14 questionnaires from the household survey did not contain complete or legible postcodes but we are confident the respondent resided within the designated sample areas and the questionnaire was included in the analysis.

## 2. Characteristics of Respondents

Table 2.1 Demographic characteristics [2011 respondent figures are in brackets and 2011 and 2010 percentages in colour]

|  | Number | Percentage |
| :---: | :---: | :---: |
| Gender |  |  |
| Male | 1381 [1468] | 40.941 .240 .1 |
| Female | 1998 [2098] | 59.158 .859 .9 |
| Age |  |  |
| 16-19 | 95 [126] | $\begin{array}{llll}2.8 & 3.5 & 3.6\end{array}$ |
| 20-24 | 213 [231] | $\begin{array}{llll}6.2 & 6.4 & 6.0\end{array}$ |
| 25-34 | 556 [555] | 16.215 .514 .9 |
| 35-49 | 878 [889] | 25.624 .826 .3 |
| 50-59 | 555 [579] | 16.216 .214 .9 |
| 60+ | 1129 [1205] | 33.033 .634 .3 |

## 3. Findings

### 3.1. Smoking Prevalence.

Smoking Prevalence - Overall Results 2009-2012 [Sample Base for 2012 = 3435]

| Classification | $\mathbf{2 0 0 9}$ | $\mathbf{2 0 1 0}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 2}$ | +/- Variation 2009 - 2012 | $\mathbf{9 5 \%}$ C.I. | Result |
| :--- | :--- | :--- | :--- | :--- | :---: | :--- | :--- |
| Overall Smoking Prevalence | $34.7 \%$ | $34.5 \%$ | $33.2 \%$ | $31.4 \%$ | $-3.3 \%$ | $+/-1.55$ | Significant |

Smoking Prevalence - Gender 2009-2012 [Sample Base for 2012 in brackets]

| Classification | $\mathbf{2 0 0 9}$ | $\mathbf{2 0 1 0}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 2}$ | +/- Variation 2009 - 2012 | 95\% C.I. | Result |
| :--- | :--- | :--- | :--- | :--- | :---: | :--- | :--- |
| Male [1381] | $35.1 \%$ | $35.5 \%$ | $35.3 \%$ | $36.2 \%$ | $+1.1 \%$ | $+/-2.53$ | Not Significant |
| Female [1998] | $34.5 \%$ | $33.8 \%$ | $31.7 \%$ | $28.9 \%$ | $-5.6 \%$ | $+/-1.99$ | Significant |

Smoking Prevalence - Ethnicity 2009-2012 [Sample Base for 2012 in brackets]

| Classification | $\mathbf{2 0 0 9}$ | $\mathbf{2 0 1 0}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 2}$ | +/- Variation 2009-2012 | 95\% C.I. | Result |
| :--- | :--- | :--- | :--- | :--- | :---: | :--- | :--- |
| White British [3301] | 34.9 | 34.7 | 33.6 | 31.9 | $-3.0 \%$ | $+/-1.56$ | Significant |
| BME [109] | 29.4 | 29.8 | 21.1 | 18.4 | $-11.0 \%$ | $+/-7.27$ | Significant |

Smoking Prevalence - Occupation 2009-2012 [Sample Base for 2012 in brackets]

| Classification | $\mathbf{2 0 0 9}$ | $\mathbf{2 0 1 0}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 2}$ | +/- Variation 2009 - <br> $\mathbf{2 0 1 2}$ | 95\% C.I. | Result |
| :--- | :---: | :---: | :---: | :---: | :---: | :--- | :--- |
| Routine, Manual or <br> Unemployed[2679] | 38.3 | 39.0 | 37.1 | 32.7 | $-5.6 \%$ | $+/-1.78$ | Significant |
| Other [729] | 25.7 | 24.9 | 23.6 | 26.2 | $+0.5 \%$ | $+/-3.19$ | Not <br> Significant |
| Not Stated/Unable to Code [27] | 30.3 | 23.5 | 27.4 | 37.0 | $+6.7 \% \%$ | $+/-$ <br> 18.21 | Not <br> Significant |

Smoking Prevalence - Age 2009-2012 [Sample Base for 2012 in brackets]

| Classification | $\mathbf{2 0 0 9}$ | $\mathbf{2 0 1 0}$ | $\mathbf{2 0 1 1}$ | $\mathbf{2 0 1 2}$ | +/- Variation 2009 - 2012 | 95\% C.I. | Result |
| :--- | :--- | :--- | :--- | :--- | :---: | :--- | :--- |
| $16-19[95]$ | $38.3 \%$ | $30.3 \%$ | $35.8 \%$ | $31.6 \%$ | $-6.7 \%$ | $+/-9.35$ | Not Significant |
| $20-24[213]$ | $38.9 \%$ | $36.9 \%$ | $31.4 \%$ | $31.0 \%$ | $-7.9 \%$ | $+/-6.21$ | Significant |
| $25-34[556]$ | $43.2 \%$ | $38.7 \%$ | $40.5 \%$ | $38.5 \%$ | $-4.7 \%$ | $+/-4.04$ | Not Significant |
| $35-49[878]$ | $42.2 \%$ | $41.0 \%$ | $40.4 \%$ | $37.2 \%$ | $-5.0 \%$ | $+/-3.20$ | Significant |
| $50-59[555]$ | $37.1 \%$ | $40.1 \%$ | $34.5 \%$ | $35.5 \%$ | $-1.6 \%$ | $+/-3.98$ | Not Significant |
| $60+[1129]$ | $24.2 \%$ | $25.5 \%$ | $24.4 \%$ | $21.8 \%$ | $-2.4 \%$ | $+/-2.41$ | Not Significant |

N.B. Total sample sizes within each classification category do not add to 3,435 because of missing data. The method for classifying occupations changed in 2012.

## TECHNICAL NOTE.

Prevalence is calculated from the responses to the question asked in the interview, ‘Do you now smoke: Daily, Occasionally or Not at all?’ [Q4]. Respondents who answer either 'Daily' or 'Occasionally' are counted as currently smoking for the calculation, while those who answer 'Not at all' are not. The base figure used to calculate the prevalence rate also includes respondents who have been routed to the end of the questionnaire by question 1 or 2, ('Have you ever smoked?' and 'Have you ever smoked at least 100 cigarettes in your lifetime?') and will be missing cases. It is unlikely that any respondents will have refused to answer these initial questions or halted the interview at this stage, so there should be little if any distortion of the prevalence figures from incorrect attribution of missing cases.

## Smoking Prevalence 2009-2012

[\% No. of respondents smoking on day of interview]

## Smoking Habits 2009-2012

### 3.2. Lifetime Smoking Habits

| Lifetime smoking | Never Smoked in lifetime | Ever smoked in lifetime | Smoked 100 cigarettes in lifetime | Smoked daily in lifetime |
| :---: | :---: | :---: | :---: | :---: |

| 35-49 | 16.1116 .27 | 17.6116 .57 |  |  |  |  |  |
| 50-59 | 19.4918 .48 | 19.4519 .89 | 3.00 | 2.00 |  |  |  |
| 60+ | 18.7018 .51 | 17.9018 .12 | 8.30 | 6.33 |  |  |  |

We have shown a comparison with 2011 for cigarettes to show the consistency of results over two years. Extreme care needs to be exercised with some results because of very small sample sizes.

Table 3.6 Time since last smoked daily. [Figures in main body of table are actual numbers of respondents]

| $\mathbf{6 0 +}$ |  |  |  |

The sample base for this question is all respondents who have smoked at least 100 cigarettes in their lifetime. The fact the actual sample size varies is because some respondents chose not to or refused to answer the question.

## APPENDICES

## No 1. Protocols.

WIRRAL SMOKING RESEARCH - PROTOCOLS

1. POSTCODES

In the previous two prevalence surveys some respondents who resided outside the postcode defined area were included in the survey. This was a judgement call made by the fieldworker when she had exhausted the number of permitted 'call backs' and invariably involved the selection of households within very close proximity to those from whom it had been impossible to obtain an answer or the property was vacant or in a perceived dangerous area.
The next two surveys [September/October 2011 and September/October 2012] will be based on a new set of postcodes and it has been agreed that only households within the defined postcode area will be included in the analysis. Interviewer instructions will be adjusted accordingly but quality control procedures will be introduced to reject any rogue postcodes prior to the data input and analysis stages.
2. MISSING CLASSIFICATION [DEPENDENT] DATA

Occasionally interviewers will fail to record some personal aspect of the respondent due to personal error or the respondent declines to cooperate. The questionnaire will be included for analysis but where an analysis is based on the personal data the base figure will be changed to reflect missing 'cases'. The base number will be the actual number of 'cases' and the percentage will be based on the actual number of 'cases'.

Where an interviewer fails to record the answer to a question in the body of the questionnaire, for whatever reason, the report of findings will calibrate the results to the appropriate base figure. The base figure will not be adjusted to accommodate the missing 'cases'. In this way consistency is maintained. The percentage figure shown in any table or graph will however be based on the number of respondents who actually answered the question. This percentage figure will be used as the basis of any calculation relating to 'population' predictions.
4. RESPONDENTS WHO QUIT ON THEIR OWN

Respondents who quit on their own [Q5] on 2011 panel survey questionnaire 'those who have quit' will be used as the base figure to investigate all aspects of quitting behaviour.

## 5. SMOKING PREVALENCE

Prevalence is calculated from the responses to the question asked in the interview, 'Do you now smoke: Daily, Occasionally or Not at all?' [Q4]. Respondents who answer either 'Daily' or 'Occasionally' are counted as currently smoking for the calculation, while those who answer 'Not at all' are not. The base figure used to calculate the prevalence rate also includes respondents who have been routed to the end of the questionnaire by question 1 or 2, ('Have you ever smoked?' and 'Have you ever smoked at least 100 cigarettes in your lifetime?') and will be missing cases. It is unlikely that any respondents will have refused to answer these initial questions or halted the interview at this stage, so there should be little if any distortion of the prevalence figures from incorrect attribution of missing cases.

## No 2. Area Details.

Smoking Prevalence by Area

*The above figures represent the smoking prevalence in each area, presented as a percentage of the total number of interviewees - That is 3435

## Smoking Prevalence*

*The above figures represent the smoking prevalence in each area, represented as a percentage of the number of respondents in each area; some caution needs to be applied in respect of some of these figures.

## No 3. Additional Notes on Sampling Composition, Profile and Analysis.

1. Ethnicity

The total number of non-white respondents in the total sample amounted to 68 or approximately $2 \%$. A full detailed breakdown of the 68 respondents by ethnicity is shown in Table 2.1. Given the diverse nature of this group it is not possible to formulate any credible conclusions relating to smoking behaviour. In previous years this sample was boosted by an additional 60+ interviews with members of the BME community. Any analysis of this group was undertaken by Wirral NHS. Anecdotally, the profile and characteristics of this group has varied significantly over the years making yearly comparisons difficult. We can only suggest that this is due to population mobility.

## 2. Household Composition and Car Ownership

Information was never collected about household composition such as children living at home or car ownership. The questions about smoking in the home and in the car were introduced at our suggestion following similar work undertaken in Liverpool. Should future research be commissioned we would suggest that these additional questions be included.

## 3. Reasons for Women Quitting Smoking

We have no way of explaining why women have been more motivated to quit smoking than men. The reason to quit is highly complex and there has never been any attempt in this survey to provide the answer to 'why'. The subsequent follow up panel survey carried out in March of each year with smokers did attempt to provide insights into quitting behaviour.
4. Sources of Support for Quitting Smoking

There is no further breakdown of the category 'other' in the question relating to the methods used. The detail of 'other' support attempts was not recorded by field interviewers.

## No 4. Smoking Prevalence Questionnaire.

1. Have you ever smoked?
$\square$ YES
$\square$ NO Go to Q17
2. Have you ever smoked at least $\mathbf{1 0 0}$ cigarettes in your lifetime?
