Claughton	74
Clatterbridge	70
Rock Ferry	68
Seacombe	67
Oxton	60
Birkenhead and Tranmere	57
Bidston and St James	55

Note(s):
¹ Positive cases sourced from Daily summary | Coronavirus in the UK (data.gov.uk) cumulative total is subject to retrospective addition which can mean it increases by more than the weekly total
² Case rate - the cumulative number of confirmed cases of COVID-19 for the 7-day period divided by the total population of each area multiplied by 100,000
³ From 31/01/2022, COVID-19 cases in England now include reinfections (previously, figures only reported COVID-19 cases as the date of first infection, so individuals were only ever counted once). Infections will now be counted if there are at least 90 days between positive tests. Due to this change, cases are likely to show an increase of around 10%. More information can be found on the [Coronavirus dashboard](https://coronavirus.data.gov.uk) or please copy this web address <https://coronavirus.data.gov.uk> into your browser

Testing in Wirral (7 days to 11/03/2022)

- There was an increase in number of tests to 11th March (30,293 vs 25,534 last week)
- Testing rate was 260.9 in 7 days to 9th March (compared to 238.1 last week)

The weekly Coronavirus (COVID-19) surveillance report for Wirral

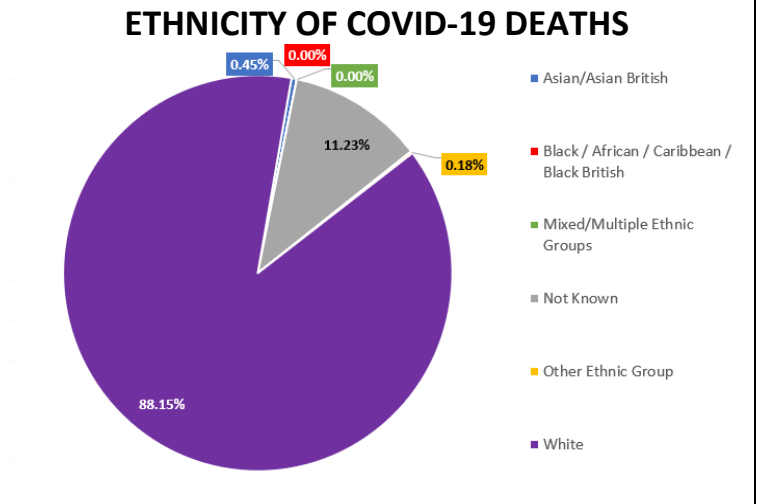

Week ending: Friday 11th March 2022

CONFIRMED COVID-19 CASES BY AGE AND GENDER

36 years all time median age⁴ **43 years** 7-day median age⁴

⁴median age is the middle value in a range - half of the cases are younger than this age and half are older (all persons)
Note(s): Some case records do not currently have full age and/or gender details and are therefore not included in the above chart; therefore, figures will not sum to headline totals

Note(s): From 04/03/2022, COVID-19 deaths data will now be defined as those where a COVID-19 ICD10 code (U071 or U072) is recorded on the death certificate and will be updated monthly by ONS. Previously, the definition used was any death that occurred within 28 days of a positive COVID-19 test, as reported daily by NHS England and PHE (now UKSHA). (Last updated in March 2022)

COVID-19 RELATED MORTALITY

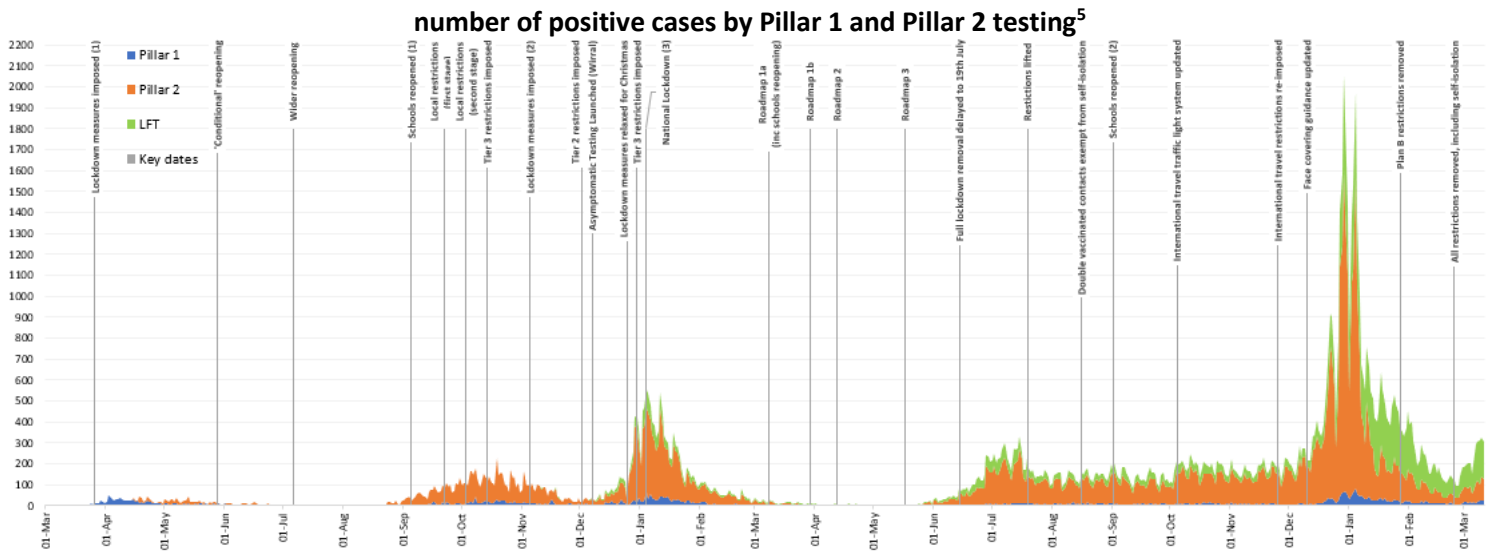

Note(s): From 04/03/2022, COVID-19 deaths data will now be defined as those where a COVID-19 ICD10 code (U071 or U072) is recorded on the death certificate and will be updated monthly by ONS. Previously, the definition used was any death that occurred within 28 days of a positive COVID-19 test, as reported daily by NHS England and PHE (now UKSHA). From 31/01/2022, COVID-19 cases in England now include reinfections (previously, figures only reported COVID-19 cases as the date of first infection, so individuals were only ever counted once) this has increased the number of deaths. Some records do not currently have full age and/or gender details and are therefore not included in the above chart; therefore, figures will not sum to headline totals. Cases are subject to retrospective review and may be reallocated to other Local Authorities.

The weekly Coronavirus (COVID-19) surveillance report for Wirral

Week ending: Friday 11th March 2022

EPIDEMIC CURVE

⁵The most recent week is a partial week and only data from more than five days ago can be considered complete

Note(s):

The data are shown by the date the specimen was taken

Pillar 1 data is for swab testing in PHE labs and NHS hospitals for those with a clinical need as well as staff

Pillar 2 data is for swab testing for the wider population, as set out in government guidance

LFT (lateral flow device) data is for rapid tests in the community (which also make up part of Pillar 2 testing)

Details around the government roadmap can be found here: <https://www.gov.uk/government/publications/covid-19-response-spring-2021/covid-19-response-spring-2021-summary>

HOSPITALISED COVID-19 CASES

Number of beds occupied by confirmed COVID-19 patients by bed type (Wirral University Teaching Hospital (WUTH) NHS Foundation Trust)

Note(s):

The peak of WUTH beds occupied by patients with COVID-19 is 279 (January 2021). This surpassed the previous peak of 131 (April 2020)
